WEN-HORNG SHEU

(530) 979-6045 | wsheu@ucdavis.edu | https://www.linkedin.com/in/whsheu/ | https://whsheu.github.io/

Education

Ph.D. Candidate in Computer Science, University of California, Davis; GPA: 4.0/4.0 *2023-2028 (expected)*

· Research Areas: Distributed Algorithms, Streaming Algorithms, Large-Scale Computation.

M.S. in Computer Science, National Tsing Hua University; GPA: 3.9/4.0 *2019-2021*

· Coursework: Approximation Algorithms, Computational Geometry.

B.S. in Computer Science, National Tsing Hua University; GPA: 3.85/4.0 *2015-2019*

· Coursework: Parallel Algorithm Design, Advanced Data Structures, Introduction to Machine Learning.

Peer-Reviewed Publications

Fixed-Threshold Peeling in Sublinear MPC: Round-Approximation Tradeoffs and Applications DISC '26

· Designed distributed algorithms for the densest subgraph problem, with applications in community detection.

· Reduced round complexity in the Massively Parallel Computation (MPC) model via a graph exploration technique.

Faster Semi-streaming Matchings via Alternating Trees ICALP '25

· Designed a streaming algorithm for computing a $(1+\epsilon)$-approximate matching in memory-constrained settings.

· Improved a STOC '22 result, reducing the pass complexity from $O(\epsilon^{-19})$ to $O(\epsilon^{-6})$ via a new data structure.

Faster MPC Algorithms for Approximate Allocation in Uniformly Sparse Graphs SPAA '25

· In collaboration with Google Research, improved a distributed algorithm with applications in online advertising.

· Reduced round complexity from $O(\log n)$ to $\tilde{O}(\sqrt{\log n})$ using random sampling, extending an ICML '18 result.

A Framework for Boosting Matching Approximation: Parallel, Distributed, and Dynamic SPAA '25

· Proposed faster algorithms for computing a $(1+\epsilon)$-approximate matching in distributed and dynamic settings.

A Kernelization Algorithm for Finding a Perfect Phylogeny from Mixed Tumor Samples TCBB '25

· Developed a preprocessing procedure with applications in analyzing tumor samples; accelerated existing algorithms.

Faster Algorithms for Constructing Frequency Difference Consensus Trees TCBB '25

· Improved the time complexity of existing algorithms for identifying the common structure of phylogenetic trees.

Parameterized Complexity for Finding a Perfect Phylogeny from Mixed Tumor Samples SIDMA '23

· Proposed a faster algorithm for the split-row problem, with applications in analyzing tumor samples.

Software Project

Critical Path Reporting for Static Timing Analysis (Second Place in ACM TAU 2018 Contest)

· Contributed to a C++ tool of 5,000+ lines of code for analyzing digital circuits specified in Verilog format.

· Implemented Eppstein's k-shortest path algorithm for enumerating critical paths through given logic gates.

Selected Honors

Shadow Program Committee Member for ACM SPAA 2026

· Served on the committee for a parallel algorithms conference; reviewed 6 papers and participated in committee discussions.

Gold Award in the 2019 ICPC Asia Taipei-Hsinchu Regional Contest

· Competed in 6+ international programming contests, including multiple ICPC regional contests.

Grandmaster on Codeforces (max rating 2551)

· Ranked as a Grandmaster, within the top 1% globally on Codeforces, a competitive programming platform.

· Solved 1,500+ problems; placed in the top 1% among 10,000+ global contestants in 4 Codeforces contests.

Skills

Programming Languages	C++, Python
Tools	Codex, Claude Code, Git, LaTeX, Linux/Bash, LiteLLM
Languages	English (fluent, TOEFL 105/120), Chinese (native)
Coursera Certificate	AI Agents and Agentic AI with Python & Generative AI
